
2W solar panel water pump

How does a 2 hp solar water pump work?

This 2 HP solar water pump works on the solar power generated by solar panels. The radiation coming from the sun strikes the solar panel which is turned into solar energy to run the motor pump set through a solar pump controller. The solar pumping system draws water from open wells, bore wells, ponds, etc.

What is a solar water pumping system?

A solar water pumping system consists of a PV array, a motor, and a bore pump. Solar water pumping arrays can have permanent mounts, or installers may place them on passive trackers to increase pumping time and volume. Both AC and DC motors with centrifugal or displacement pumps are used in these circumstances.

What is Surface 2 hp solar water pump?

Surface 2 HP solar water pump is used to lift the water for areas where the depth is below 15 meters. Hence, it is recommended for supplying water from the surface to surface like from rivers, shallow wells, tanks, ponds, pools etc. The 2HP Surface solar pumping system can also be used to provide pressurized water for irrigation or home water.

Can a solar panel power a water pump?
