What is arc quenching Magnum DS switchgear?

The arc quenching Magnum DS switchgear detects and extinguishes an arc flash in less than 4 ms to dramatically reduce incident energy. It reacts 10x faster than systems that rely solely on circuit breakers to clear an arc fault, including maintenance switches, ZSI, bus differential relaying and arc detection relays.

How can arc-flash safety be improved?

Improve safety and reduce arc-flash hazards, including dedicated wireway and safety barriers isolating personnel from line and load. Drastically reduce the available arc-fault current. Lower arc-flash energy in a system generally translates into improved personnel safety.

What is a type 2 arc-resistant switchgear?

For low-voltage switchgear, this rating is also applicable to the secondary door. Type 2 arc-resistant ratings in accordance with IEEE standard C37.20.7 provide for arc-resistant protection around the perimeter of the switchgear with the doors closed.
