# Croatia Super Double Layer Capacitor Factory

What are electric double-layer capacitors (EDLCs)?

Electric double-layer capacitors (EDLCs) are devices based on Carbon/Carbon-based electrodes and have the characteristics of being charged and discharged very fast (within seconds) and can therefore be used where high power is required. Despite the high-power capability, these devices have limitations in energy density.

What is a lithium ion capacitor?

This includes: Lithium-ion capacitors - also called asymmetric capacitors or superbatteries - are typically based on a graphite or Li<sub>2</sub>Ti<sub>5</sub>O<sub>4</sub> negative electrode (the faradaic electrode) and an activated carbon positive electrode (the double layer-type electrode) and already found a niche in the market.

What are TDK supercapacitors?

TDK's large-capacity, thin supercapacitors expand the possibilities of application development.

What are supercapacitors & why are they important?

Notice: Datasheets/Catalogs Are Subject to Change Without Notification SuperCapacitors are a valuable technology for providing a unique combination of characteristics, particularly very high pulse power and capacitance densities.

YAGEO-KEMET YAGEO-KEMET is one of the leading manufacturers of tantalum, polymer and film capacitors, but also offers special leakage current sensors for industry and automotive
