
Hargeisa applies for EMS for base station room

How do fire and EMS Station personnel get contaminated?

Station personnel may be susceptible to food and waterborne-based infections through improper food storage and backflow from sewage systems. At the fire or EMS station, cross contamination may occur in laundry facilities, sewage systems, and outdoor operations involving training.

Should EMS be compatible with a local hospital?

For EMS service, it may also be important to consult with the local hospital for compatibility between the department and hospitals to enhance the responsiveness of both facilities. If the station is permanently staffed, then station occupant comforts should be addressed.

What is the design and construction of a fire and emergency services station?

The design and construction of a fire and emergency services station is a long and complicated process. Many different decisions are required, and different people may be involved in those decisions. The factors governing facility design vary from department to department, and even within the organization itself.

How have fire and EMS station designs changed over the past decade?

Fire and EMS station designs have changed over the past decades. They are being increasingly recognized as specialized facilities with their own specific design approaches. Design and facility features differ among fire stations, EMS stations, and other types of facilities based on a variety of factors, including: j The role of the station.
