
London Solar Power Generation System

How has solar power benefited the UK?

So far, this year's solar electricity output in the UK has avoided gas imports of roughly \$813.9 million, which would have released approximately 6.61 million tons of carbon dioxide. Though this year's solar record was driven partially by the sunniest spring on record, rising capacity also helped.

How much electricity did UK solar farms generate in 2025?

The UK's solar farms and rooftops generated more electricity than ever before in the first five months of 2025, as the country enjoyed its sunniest spring on record. The figures, revealed in new Carbon Brief analysis, show that the nation's solar sites have generated a record 7.6 terawatt hours (TWh) of electricity during January to May 2025.

How much solar power does the UK produce a month?

The amount of electricity generated from solar also hit a new high of 2.5 TWh in May 2025, beating April 2025's 2.3 TWh into second place. The previous record of 2.1 TWh was set in June 2024. The figure below shows the average monthly output of the UK's solar capacity, in MW.

How much solar power does Great Britain have in 2025?

Solar power in Great Britain had a record-breaking start to 2025, with solar up 32%, to produce a record 9.91 TWh, breaking generation records for five months in a row since March 2025. A further record was broken on the 8th of July with the highest ever level of solar power on the grid at 14 GW. This level is repeatedly being raised.
