
Shanghai Qi 2MW wind turbine cooling system

Which wind turbine is used for cooling test in Xinjiang?

From May to September 2018, a 2.5 MW permanent magnet wind turbine was used for cooling test in Dabancheng wind farm, Xinjiang, China. The cooling system is connected to the generator outlet through rubber pipes. 2.5 MW PMSG permanent magnet wind turbine is the main wind power generation equipment in Xinjiang.

What is Xinjiang's wind power generation system?

Fig. 10. Cooling system test prototype. 2.5 MW PMSG permanent magnet wind turbine is the main wind power generation equipment in Xinjiang. The high temperature rise of the generator is closely related to the ambient temperature, unit running time and power generation.

Where is CSIC HZ Windpower's 10MW H210-10.0 turbine located?

CSIC HZ Windpower's 10MW H210-10.0 turbine is now in full serial production and operating outside the coast of Shandong in China. Read Case Study State of the art heat exchanger for high cooling efficiency and optimized system design for low power consumption. Proven system design with low complexity, few moving components and built-in redundancy.

What is a 2MW wind turbine?

These 2MW series wind turbines are double-fed, variable pitch windmills. The wind generators can be produced with rotor diameters of 87 /93 /99 /105 /111/116 meters. This allows for wind power generation in wind classes from I to IV. 5942/6789/7693/8659/9677/10565. Following the ISO12944 standards, according to the wind field environment.

In order to solve the problem of excessive temperature rise caused by 2.5 MW permanent magnet wind turbine in operation, this paper designs a heat dissipation system. The

2MW series wind turbines are double-fed, variable pitch windmills. It can be produced with different rotor diameters. This allows for wind power generation in wind classes ...

In order to verify the cooling quality of the cooling system for the permanent magnet wind turbine, the cooling system prototype is shown in Fig. 10. From May to September 2018, ...

Today, the gearless horizontal axis wind turbines are mainstream in wind energy industry. High demands of electric power led to bigger systems and active cooling reduces the ...

The thermal management of wind turbines is an important guarantee for their long-term stable and reliable operation. This article combines a new type of pump driven two-phase ...

2MW series wind turbines are double-fed, variable pitch windmills. It can be produced with different rotor diameters. This allows ...

Complete Wind Turbine Cooling Systems Our wind turbine cooling systems help turbine manufacturers ensure reliable cooling for generators and nacelles by reducing ...

Semantic Scholar extracted view of "Design and research of cooling system for 2.5 MW permanent magnet wind turbine" by Ning-qiang Shi et al.

The 2.5 MW direct-drive permanent magnet wind turbine cooling system uses forced air cooling, and the heat exchanger of the cooling system does not exchange gas, but ...

Based on the mature design of the 2.XMW platform, considering low and medium wind speed regions with the higher capacity and the more complex environmental adaptation ...
