
Solar panels insulated roof

Are in-roof solar panels right for Your House?

They integrate smoothly into your roof during construction or when you're replacing an old roof, avoiding the visual clutter of typical installations. Blending seamlessly with your roofline, in-roof solar panels can be a game-changer for your home. Here's why:

Can solar panels be installed on a roof?

Both products guarantee a sustainable and long-lasting fixation of the solar panel on the roof, without compromising the roof's thermal insulation. Installing solar panels or photovoltaic panels on the roof of a home or building can put the sustainability of the building at risk if it is not done correctly.

What are in-roof solar panels?

In-roof solar panels, also known as integrated solar panels, are solar panels that are installed directly into the roof structure instead of being mounted on top. They replace the roofing material itself and sit flush with the roofline, providing a seamless aesthetic that traditional solar panels do not. Are in-roof solar panels as efficient?

How do in-roof solar panels work?

Just like traditional solar panels, in-roof versions use photovoltaic cells to turn sunlight into electricity. The big plus? They integrate smoothly into your roof during construction or when you're replacing an old roof, avoiding the visual clutter of typical installations.
